Capture interface:
-i <interface>, --interface <interface>
name or idx of interface (def: first non-loopback)
-f <capture filter> packet filter in libpcap filter syntax
-s <snaplen>, --snapshot-length <snaplen>
packet snapshot length (def: appropriate maximum)
-p, --no-promiscuous-mode
don't capture in promiscuous mode
-I, --monitor-mode capture in monitor mode, if available
-B <buffer size>, --buffer-size <buffer size>
size of kernel buffer in MiB (def: 2MiB)
-y <link type>, --linktype <link type>
link layer type (def: first appropriate)
--time-stamp-type <type> timestamp method for interface
-D, --list-interfaces print list of interfaces and exit
-L, --list-data-link-types
print list of link-layer types of iface and exit
--list-time-stamp-types print list of timestamp types for iface and exit
Capture display:
--update-interval interval between updates with new packets, in milliseconds (def: 100ms)
Capture stop conditions:
-c <packet count> stop after n packets (def: infinite)
-a <autostop cond.> ..., --autostop <autostop cond.> ...
duration:NUM - stop after NUM seconds
filesize:NUM - stop this file after NUM KB
files:NUM - stop after NUM files
packets:NUM - stop after NUM packets
Capture output:
-b <ringbuffer opt.> ..., --ring-buffer <ringbuffer opt.>
duration:NUM - switch to next file after NUM secs
filesize:NUM - switch to next file after NUM KB
files:NUM - ringbuffer: replace after NUM files
packets:NUM - switch to next file after NUM packets
interval:NUM - switch to next file when the time is
an exact multiple of NUM secs
printname:FILE - print filename to FILE when written
(can use 'stdout' or 'stderr')
Input file:
-r <infile>, --read-file <infile>

(can use 'stdout' or 'stderr')
Input file:
-r <infile>, --read-file <infile>
set the filename to read from (or '-' for stdin)
Processing:
-2 perform a two-pass analysis
-M <packet count> perform session auto reset
-R <read filter>, --read-filter <read filter>
packet Read filter in Wireshark display filter syntax
(requires -2)
-Y <display filter>, --display-filter <display filter>
packet displaY filter in Wireshark display filter
syntax
-n disable all name resolutions (def: "mNd" enabled, or
as set in preferences)
-N <name resolve flags> enable specific name resolution(s): "mtndsNvg"
-d <layer_type>==<selector>,<decode_as_protocol> ...
"Decode As", see the man page for details
Example: tcp.port==8888,http
-H <hosts file> read a list of entries from a hosts file, which will
then be written to a capture file. (Implies -W n)
--enable-protocol <proto_name>
enable dissection of proto_name
--disable-protocol <proto_name>
disable dissection of proto_name
--only-protocols <protocols>
Only enable dissection of these protocols, comma
separated. Disable everything else
--disable-all-protocols
Disable dissection of all protocols
--enable-heuristic <short_name>
enable dissection of heuristic protocol
--disable-heuristic <short_name>
disable dissection of heuristic protocol
Output:
-w <outfile|-> write packets to a pcapng-format file named "outfile"
(or '-' for stdout). If the output filename has the
.gz extension, it will be compressed to a gzip archive
--capture-comment <comment>
add a capture file comment, if supported

this option can be repeated to print multiple fields
-E<fieldsoption>=<value> set options for output when -Tfields selected:
bom=y|n print a UTF-8 BOM
header=y|n switch headers on and off
separator=/t|/s|<char> select tab, space, printable character as separator
occurrence=f|l|a print first, last or all occurrences of each field
aggregator=,|/s|<char> select comma, space, printable character as
aggregator
quote=d|s|n select double, single, no quotes for values
-t (a|ad|adoy|d|dd|e|r|u|ud|udoy)[.[N]]|.[N]
output format of time stamps (def: r: rel. to first)
-u s|hms output format of seconds (def: s: seconds)
-l flush standard output after each packet
(implies --update-interval 0)
-q be more quiet on stdout (e.g. when using statistics)
-Q only log true errors to stderr (quieter than -q)
-g enable group read access on the output file(s)
-W n Save extra information in the file, if supported.
n = write network address resolution information
-X <key>:<value> eXtension options, see the man page for details
-U tap_name PDUs export mode, see the man page for details
-z <statistics> various statistics, see the man page for details
--export-objects <protocol>,<destdir>
save exported objects for a protocol to a directory
named "destdir"
--export-tls-session-keys <keyfile>
export TLS Session Keys to a file named "keyfile"
--color color output text similarly to the Wireshark GUI,
requires a terminal with 24-bit color support
Also supplies color attributes to pdml and psml formats
(Note that attributes are nonstandard)
--no-duplicate-keys If -T json is specified, merge duplicate keys in an object
into a single key with as value a json array containing all
values
--elastic-mapping-filter <protocols> If -G elastic-mapping is specified, put only the
specified protocols within the mapping file

term-1
term-2
term-3
term-4
term-5
packet snapshot length (def: appropriate maximum)
-p, --no-promiscuous-mode
don't capture in promiscuous mode
-I, --monitor-mode capture in monitor mode, if available
-B <buffer size>, --buffer-size <buffer size>
size of kernel buffer in MiB (def: 2MiB)
-y <link type>, --linktype <link type>
link layer type (def: first appropriate)
--time-stamp-type <type> timestamp method for interface
-D, --list-interfaces print list of interfaces and exit
-L, --list-data-link-types
print list of link-layer types of iface and exit
--list-time-stamp-types print list of timestamp types for iface and exit
Capture display:
--update-interval interval between updates with new packets, in milliseconds (def: 100ms)
Capture stop conditions:
-c <packet count> stop after n packets (def: infinite)
-a <autostop cond.> ..., --autostop <autostop cond.> ...
duration:NUM - stop after NUM seconds
filesize:NUM - stop this file after NUM KB
files:NUM - stop after NUM files
packets:NUM - stop after NUM packets
Capture output:
-b <ringbuffer opt.> ..., --ring-buffer <ringbuffer opt.>
duration:NUM - switch to next file after NUM secs
filesize:NUM - switch to next file after NUM KB
files:NUM - ringbuffer: replace after NUM files
packets:NUM - switch to next file after NUM packets
interval:NUM - switch to next file when the time is
an exact multiple of NUM secs
printname:FILE - print filename to FILE when written
(can use 'stdout' or 'stderr')
Input file:
-r <infile>, --read-file <infile>
set the filename to read from (or '-' for stdin)
Processing:
-2 perform a two-pass analysis
-M <packet count> perform session auto reset
-R <read filter>, --read-filter <read filter>
Snipping Tool
Screenshot copied to clipboard
Automatically saved to screenshots folder.

term-1
term-2
term-3
term-4
term-5
-2 perform a two-pass analysis
-M <packet count> perform session auto reset
-R <read filter>, --read-filter <read filter>
packet Read filter in Wireshark display filter syntax
(requires -2)
-Y <display filter>, --display-filter <display filter>
packet displaY filter in Wireshark display filter
syntax
-n disable all name resolutions (def: "mNd" enabled, or
as set in preferences)
-N <name resolve flags> enable specific name resolution(s): "mtndsNvg"
-d <layer_type>==<selector>,<decode_as_protocol> ...
"Decode As", see the man page for details
Example: tcp.port==8888,http
-H <hosts file> read a list of entries from a hosts file, which will
then be written to a capture file. (Implies -W n)
--enable-protocol <proto_name>
enable dissection of proto_name
--disable-protocol <proto_name>
disable dissection of proto_name
--only-protocols <protocols>
Only enable dissection of these protocols, comma
separated. Disable everything else
--disable-all-protocols
Disable dissection of all protocols
--enable-heuristic <short_name>
enable dissection of heuristic protocol
--disable-heuristic <short_name>
disable dissection of heuristic protocol
Output:
-w <outfile|-> write packets to a pcapng-format file named "outfile"
(or '-' for stdout). If the output filename has the
.gz extension, it will be compressed to a gzip archive
--capture-comment <comment>
add a capture file comment, if supported
-C <config profile> start with specified configuration profile
--global-profile use the global profile instead of personal profile
-F <output file type> set the output file type; default is pcapng.
an empty "-F" option will list the file types
-V add output of packet tree (Packet Details)
-O <protocols> Only show packet details of these protocols, comma

--global-profile use the global profile instead of personal profile
-F <output file type> set the output file type; default is pcapng.
an empty "-F" option will list the file types
-V add output of packet tree (Packet Details)
-O <protocols> Only show packet details of these protocols, comma
separated
-P, --print print packet summary even when writing to a file
-S <separator> the line separator to print between packets
-x add output of hex and ASCII dump (Packet Bytes)
--hexdump <hexoption> add hexdump, set options for data source and ASCII dump
all dump all data sources (-x default)
frames dump only frame data source
ascii include ASCII dump text (-x default)
delimit delimit ASCII dump text with '|' characters
noascii exclude ASCII dump text
time include frame timestamp preamble
notime do not include frame timestamp preamble (-x default)
help display help for --hexdump and exit
-T pdml|ps|psml|json|jsonraw|ek|tabs|text|fields|?
format of text output (def: text)
-j <protocolfilter> protocols layers filter if -T ek|pdml|json selected
(e.g. "ip ip.flags text", filter does not expand child
nodes, unless child is specified also in the filter)
-J <protocolfilter> top level protocol filter if -T ek|pdml|json selected
(e.g. "http tcp", filter which expands all child nodes)
-e <field> field to print if -Tfields selected (e.g. tcp.port,
_ws.col.info)
this option can be repeated to print multiple fields
-E<fieldsoption>=<value> set options for output when -Tfields selected:
bom=y|n print a UTF-8 BOM
header=y|n switch headers on and off
separator=/t|/s|<char> select tab, space, printable character as separator
occurrence=f|l|a print first, last or all occurrences of each field
aggregator=,|/s|<char> select comma, space, printable character as
aggregator
quote=d|s|n select double, single, no quotes for values
-t (a|ad|adoy|d|dd|e|r|u|ud|udoy)[.[N]]|.[N]
output format of time stamps (def: r: rel. to first)
-u s|hms output format of seconds (def: s: seconds)
-l flush standard output after each packet
(implies --update-interval 0)

-W n Save extra information in the file, if supported.
n = write network address resolution information
-X <key>:<value> eXtension options, see the man page for details
-U tap_name PDUs export mode, see the man page for details
-z <statistics> various statistics, see the man page for details
--export-objects <protocol>,<destdir>
save exported objects for a protocol to a directory
named "destdir"
--export-tls-session-keys <keyfile>
export TLS Session Keys to a file named "keyfile"
--color color output text similarly to the Wireshark GUI,
requires a terminal with 24-bit color support
Also supplies color attributes to pdml and psml formats
(Note that attributes are nonstandard)
--no-duplicate-keys If -T json is specified, merge duplicate keys in an object
into a single key with as value a json array containing all
values
--elastic-mapping-filter <protocols> If -G elastic-mapping is specified, put only the
specified protocols within the mapping file
--temp-dir <directory> write temporary files to this directory
(default: /tmp)
--compress <type> compress the output file using the type compression format
Diagnostic output:
--log-level <level> sets the active log level ("critical", "warning", etc.)
--log-fatal <level> sets level to abort the program ("critical" or "warning")
--log-domains <[!]list> comma-separated list of the active log domains
--log-fatal-domains <list>
list of domains that cause the program to abort
--log-debug <[!]list> list of domains with "debug" level
--log-noisy <[!]list> list of domains with "noisy" level
--log-file <path> file to output messages to (in addition to stderr)
Miscellaneous:
-h, --help display this help and exit
-v, --version display version info and exit
-o <name>:<value> ... override preference setting
-K <keytab> keytab file to use for kerberos decryption
-G [report] dump one of several available reports and exit
default report="fields"
use "-G help" for more help

```
  --log-level <level>      sets the active log level ("critical", "warning", etc.)
  --log-fatal <level>      sets level to abort the program ("critical" or "warning")
  --log-domains <[!]list>  comma-separated list of the active log domains
  --log-fatal-domains <list>
                           list of domains that cause the program to abort
  --log-debug <[!]list>    list of domains with "debug" level
  --log-noisy <[!]list>    list of domains with "noisy" level
  --log-file <path>        file to output messages to (in addition to stderr)

Miscellaneous:
  -h, --help               display this help and exit
  -v, --version            display version info and exit
  -o <name>:<value> ...    override preference setting
  -K <keytab>              keytab file to use for kerberos decryption
  -G [report]              dump one of several available reports and exit
                           default report="fields"
                           use "-G help" for more help

Dumpcap can benefit from an enabled BPF JIT compiler if available.
You might want to enable it by executing:
 "echo 1 > /proc/sys/net/core/bpf_jit_enable"
Note that this can make your system less secure!
Command 'Difference' not found, did you mean:
  command 'difference' from deb difference (2.0.0-1build3)
Try: sudo apt install <deb name>
